PROJECT REVIEW : MILESTONE PROJECT – 1

Date: 23-03-2026

End-to-End Event Lifecycle & Ticketing Platform

SDG: SDG No – SDG: SDG 9 – Industry, Innovation and Infrastructure

Presented By:

V.Rambabu– VTU25536

Reg.No:23UECS1236

Courses Handling Faculty:

Dr.HAFIZUR RAHMAN - Designation

INTRODUCTION

1

- The increasing number of events such as concerts, seminars, and workshops has made event management more complex, highlighting the limitations of traditional manual systems. These methods often lead to inefficiencies, errors, and lack of proper coordination. This project is important as it introduces a centralized digital platform that simplifies event planning, ticketing, and management processes. In real-world applications, it benefits event organizers, businesses, and participants by saving time and improving accessibility. The system provides an end-to-end solution including event creation, online ticket booking, secure payment integration, and real-time notifications. It ensures transparency, better organization, and user convenience. Overall, the platform addresses modern event management challenges through technology-driven innovation.

6

7

8

9

- In many event management scenarios, existing systems rely heavily on manual processes for organizing events, selling tickets, and maintaining records. This often results in inefficiencies, data errors, lack of coordination, and poor user experience. Additionally, there is limited transparency in ticket availability and payment handling. These challenges make it difficult for organizers to manage events smoothly and for users to access reliable information. Therefore, there is a need for a centralized, automated, and user-friendly platform. Such a system can improve accuracy, reduce manual effort, and enhance overall efficiency. It should provide seamless event lifecycle management from planning to ticketing and execution. Overall, the problem highlights the necessity for a modern digital solution in event management.

OBJECTIVE(S)

1

2

3

4

5

6

7

8

9

- 1. To design and develop an end-to-end event lifecycle and ticketing platform for efficient event management.
- 2. To implement a secure and user-friendly system for online ticket booking, payment processing, and real-time updates.

PROPOSED SYSTEM

1

- 1. The proposed solution is an end-to-end event lifecycle and ticketing platform that manages event creation, promotion, ticket booking, and execution in a single system.

2

- 2. It replaces manual processes with automation, reducing errors and improving efficiency in managing events and user data.

3

- 3. The system provides real-time ticket availability and instant booking confirmation, solving issues of overbooking and delays.

4

- 4. Secure online payment integration ensures safe and transparent financial transactions for both organizers and users.

5

- 5. It offers centralized data management, making it easier to track attendees, sales, and event performance.

6

- 6. The platform improves communication through notifications and updates, enhancing user experience.

7

- 7. Compared to existing systems, it is more scalable, user-friendly, and accessible from anywhere.

8

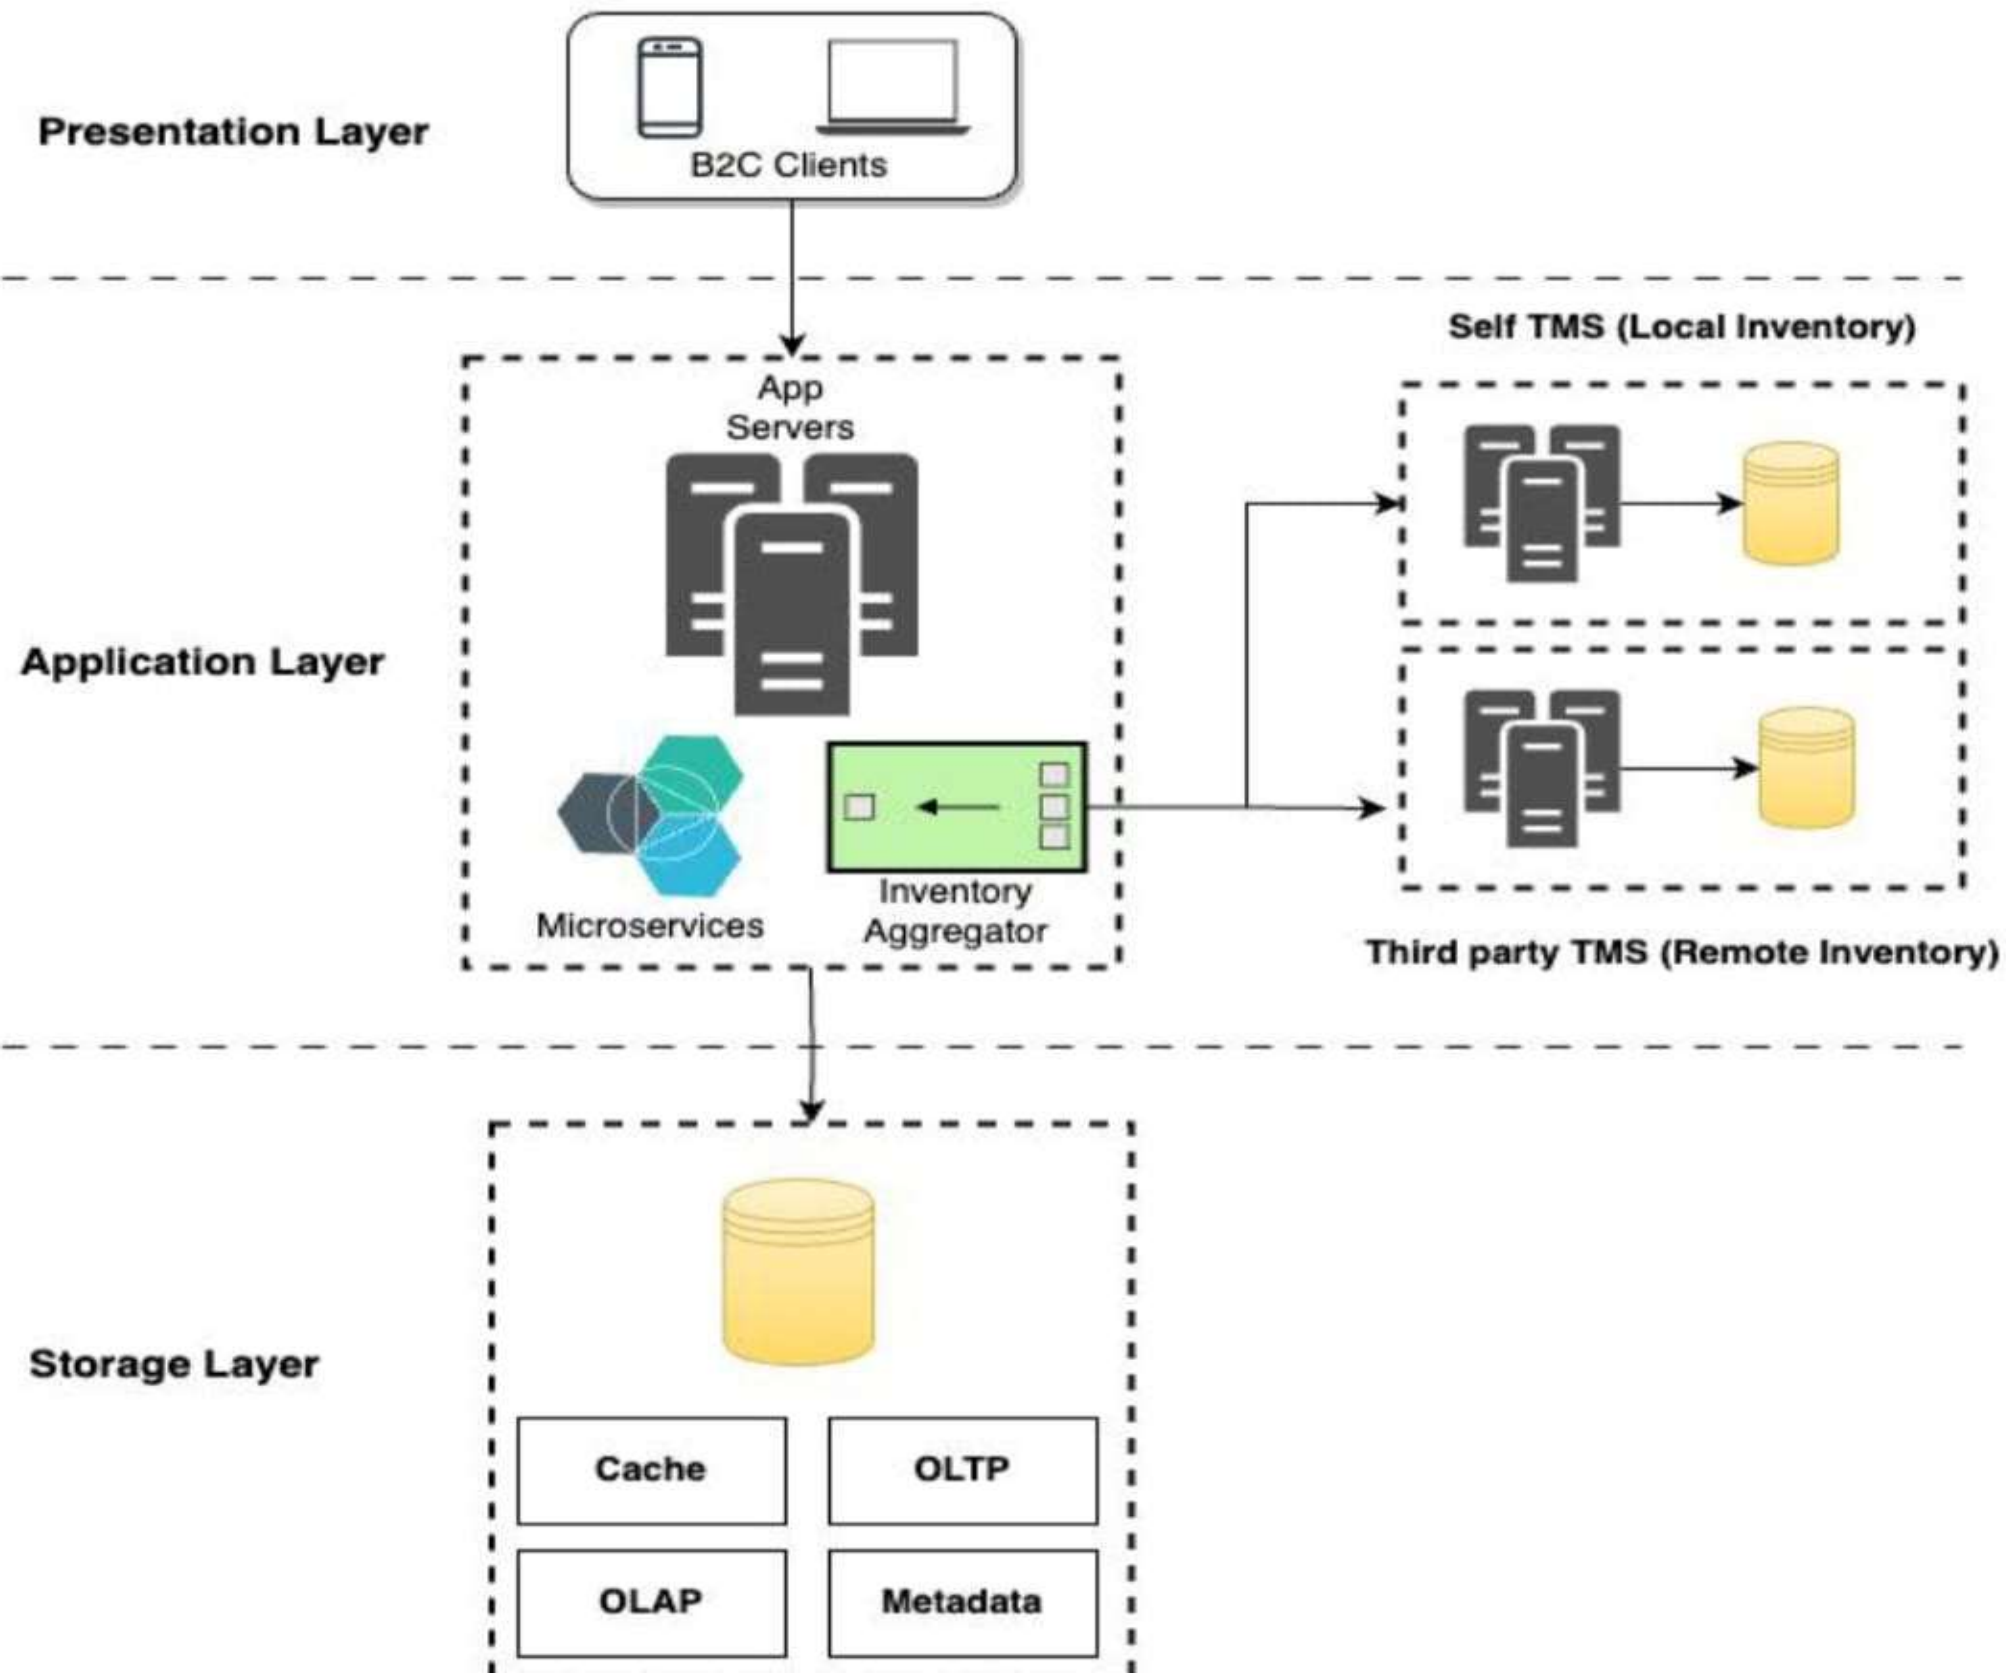

- 8. Overall, it saves time, reduces operational costs, and provides a reliable digital solution for modern event management.

TECHNOLOGIES USED

1

- Frontend:

2

- HTML, CSS, JavaScript
- React.js / Angular (for dynamic UI)

3

- Backend:

4

- Node.js with Express.js / Django / Spring Boot

5

- Database:

6

- MySQL / PostgreSQL (Relational Database)
- MongoDB (for flexible data storage)

7

- Tools:

8

- VS Code / IntelliJ IDEA (Development IDE)

9

- Hardware/Software Requirements:

- Database Server (MySQL / MongoDB)
- Operating System: Windows / Linux / macOS

MODULE DESCRIPTION

1

2

3

4

5

6

7

8

9

Module 1: User Management

Handles registration, login, and secure authentication..

Module 2: Core Processing

Implements the main business logic and processes user inputs efficiently.

Module 3: Database Management

Manages data storage, retrieval, and ensures data integrity.

Module 4: Reporting & Analytics

Generates reports and visual insights for better decision-making.

ADVANTAGES & LIMITATIONS

1

Advantages:

2

- * Simplifies event management from creation to ticket sales in one system
- * Provides real-time booking and instant ticket confirmation
- * Reduces manual work and human errors
- * Offers secure online payment options
- * Generates reports and analytics for better decision-making

3

4

5

Limitations:

6

- * Requires stable internet connectivity
- * Initial development and maintenance cost can be high
- * Security risks if data is not properly protected
- * System failures may affect ticket booking process
- * Requires technical knowledge for setup and management
